

Look, think and act from a different point of view.

Cell therapy commercialization.

Argos Therapeutics

An automated cellular and RNA processing system developed to manufacture autologous immunotherapies to treat advanced kidney cancer (metastatic renal cell carcinoma), B-cell chronic lymphocytic leukemia and HIV.

KBI Biopharma

kSep™, a closed continuous centrifuge was developed to gently concentrate capture and/or separate cells by providing a very low-shear and nourishing environment.

Developers of closed, automated solutions.

Invetech is an innovative product development company working with cell therapy and bioprocess companies by combining our system definition tools, technology and automation expertise with our client's process knowledge. We develop appropriate scale-up strategies and innovative platforms, including functionally closed systems, in collaboration with processors to meet their quality and therapeutic goals. Our specialist knowledge and skills across the full development journey, from idea to market, provide our clients with confidence that they can achieve a successful commercial outcome. Invetech's complete range of services include new product development, custom automation and contract manufacturing.
