

Helping Save One Life at a Time while Developing a Cure for Millions

The **Diabetes Research Institute** (DRI) and Foundation honored Airman Tre Porfirio (above center, between Dr. Camillo Ricordi and Colonel Craig Shriver), who was critically wounded in Afghanistan and saved by the unprecedented islet cell transplant and collaborative intervention of the University of Miami DRI and Walter Reed Army Hospital.

The DRI, its Stem Cell Programs and Regenerative Medicine Divisions are now once again at the forefront of collaborative efforts with the development of the DRI Federation, a global alliance to develop a cure for all patients with diabetes, in the fastest and most efficient way possible.

Working together, we will make diabetes history.
