

WHEN THE WORLD NEEDS A HIGHER STANDARD, THEY LOOK TO HENRY FORD

At Henry Ford Health System, we've chosen to set new standards in quality and safety for the way we deliver care.

Our goal is to improve our own System every day and to inspire others with our higher standards.

Because estimates show that if every hospital in the world adopted our guidelines, it would virtually eliminate prescription drug errors and infection. It would reduce global mortality rates by over 25 percent. And this year alone, it would save over 1.1 million lives.

Can a top ten health system* change the world?

We aim to find out.
