

SENS Foundation
works to advance
research on the
development of
rejuvenation
biotechnologies.

We promote, perform
and fund research in our
own Research Center and in
academic centers of excellence.

Our Academic Initiative introduces
a new generation of students
to rejuvenation research.

Our outreach activities and
conferences target scientific
and general audiences.

Our global networks encourage
research and funding to support our mission.

Our vision is a world in which all people have the opportunity
to live their lives free from the diseases and disabilities of aging.
